

## Counselor's Corner

### Khan Academy

Mr. Learman

Khan Academy (<https://www.khanacademy.org/>) is a free resource that offers lessons and online tutoring for students that need extra assistance. Khan Academy will be most beneficial for students struggling in math or parents that have been out of the classroom for a number of years. Students and parents are able to select certain subjects or simply select a grade level and Khan Academy will provide the necessary resources. Additionally, you can search based on a specific topic. For example, if your student is learning about graphing inequalities, you can search for videos and lessons to aid your student.

Khan Academy also contains a wide variety of lessons on computer programming and coding. If you have a student that is interested in such topics, Khan Academy starts at the very beginning principles and can teach your child through more complex issues. Furthermore, if you have an older child, Khan Academy has free SAT prep, including free practice exams.

We had a great pep session in recognizing so many students that are doing an outstanding job this school year. Great school spirit, fun dizzy bat, top NWEA recognition, club recognition, athletics, and 8th graders beating the teachers in volleyball! It was a fun day highlighting so many student accomplishments!
